## CLARESHOLM LOCAL NEWS

Mrs. Chas. Ringrose and son Donnie left last week for Mt. Bridges, Ont.

W. J. Bartlett, Editor of the *Blainville Enterprise*, was in town on Monday.

The merchants of Clareholm are offering real bargains on Saturday, August 7. See posters.

Let everyone who owns a flag fly it on Elks' sports day. It helps in giving the town a holiday air.

Glasgow & Son will take over the meat market business of Ramage & Walls on Monday next.

Messrs. Ralph and Clyde Jessup of the Nanton News, were fraternal callers at The Review office on Tuesday.

Major Schoof returned from the Crow's Nest Pass last Friday. He reports fishing in the Pass streams extra good this season.

The Lethbridge Elks Band will play for the sports here on Friday, August 6. This is a fine band and will surely be much appreciated by all.

Mrs. Geo. Maxwell underwent an operation in the Holy Cross hospital, Calgary, this week, and is reported as making favorable progress.

G. L. Morrison has his fall wheat in the stock, being the first in the district to finish fall wheat cutting. He expects to thresh next week.

Ray King, editor of the *Life Press*, was in town last Saturday. Press was in town last Saturday and called at The Review office.

Chautauqua has been well attended here this week, and the program has met with the approval of those attending. The musical programs have been extra good.

There was an electric storm accompanied by some rain on Monday. But otherwise the weather for the past week has been dry and for the most part hot. Grain is maturing rapidly.

C. W. Stewart won the prize offered by the Massey Harris Company for the most Massey Harris cream separators sold in southern Alberta for the month of June.

An auction sale of the horses, farm implements, etc., of Chas. McCorn will be held at the Vancor River barn on Saturday afternoon, August 7. A. E. Rumtins, Auctioneer.

"The Blind Goddess," with Jack Holt, Ernest Torrence, Esther Ralston and Louise Dresser at the Rex theater on Friday and Saturday this week. Adapted from the novel by Arthur Train.

Owing to the elimination of the Wednesday half holiday next week to meet the Elks' sports day on Friday, the Odd Fellows' picnic which was set for that day has been called off.

The following football players are requested to be on hand for the game with Vulcan on August 6th: Bush, Patrick, Oubridge, Garrett, Frampton, McFarlane, Webster, Lamb, Ringrose, Theising, Nightingale.

On account of the Elks' sports day, Friday, August 6, the stores of Clareholm will close on the afternoon of that day and will be open on Wednesday afternoon, August 10. The half holiday for that week will thus be on Friday instead of Wednesday.

Allan McDonald, southwest of town, had a narrow escape during the electric storm on Monday afternoon, when four of the six horses which he was driving on a plow were killed by lightning. Mr. McDonald was unconscious and considers himself fortunate to have escaped at all.

On Wednesday the Clareholm football team (rumored Okotoks, 5-0 at Okotoks, in one of the roughest games of the season. Sid Gamm scored first goal after 10 minutes play. Webster scored the second, third, fourth and fifth. Hartwell missed his chance to score when Clareholm was awarded a penalty kick, by driving the ball over the bars.

## THE BIG ELKS CARNIVAL

All the committees on the Elks' carnival are working day and night to have everything in readiness for the big day, August 6th. The football game will be called at 11 a.m. sharp. Clareholm vs. Vulcan, purse \$50.00. At 12:30 o'clock the grand street parade will take place, headed by the 25 piece Lethbridge Elks Band. From all indications this parade will be the best ever pulled off in southern Alberta, with lots of floats and comic novelties. The prizes on the different events in the parade alone total \$75.00. It will be well worth seeing.

At 1:30 o'clock Clareholm and Macleod baseball teams will clash for a purse of \$80.00, which will be interesting. After this game there will be horse races with a purse of \$200.00 hung up. You will see some of the fastest races ever pulled off in this part of Alberta. Following the races will be children's hour, with prizes and other sports. Substantial prizes will be given to the "kiddies" partaking in these events. See the children's committee.

Messrs. S. L. Fraser, Thos. Evans and Jack Hagerman for information. Following the children's half hour will be the big ball game, Savelly vs. High River, which no doubt will be the big game of the season to land the \$150.00 purse. In the evening at the open arena the big dance and carnival will take place. The floor is 40x60 where you can dance to the music of the renowned "Mack's Melody Machine," consisting of six pieces. It will be a scream from start to finish.

The Kewpie orchestra, which has been heard all over the American continent, has been engaged to furnish the music for Saturday night. All those coming will surely have a good time, and at the same time may be lucky enough to win the \$200.00 Orthodontic Victrola.

A field day is being put on at Lethbridge Experimental farm on August 3rd, starting at 2 o'clock. L. H. Newman, dominion cerealist, of Ottawa, will be present. All farmers, especially those interested in grain growing, are invited to be there. All planning to visit the experimental farm this summer will be wise to go on that date.

## BUSINESS CHANGE

Ramage & Walls wish to thank the public for their kind patronage in the past, and trust that the same measure of support will be given to their successors, Glasgow & Son.

Ramage & Walls will give their entire attention to the livestock business.

## BUSINESS CHANGE

Glasgow & Son having taken over the meat market business of Ramage & Walls, trust that by their personal attention and the best qualities of meats, etc., they will merit the same liberal support this market has received in the past.

## Chinook Gossip

Miss Dora Shelly of Calgary is visiting her sister Mrs. James Clifton.

Born, to Mr. and Mrs. E. H. Arlt, July the 13th, a son.

Mrs. Xels Nelson and daughter Helen, formerly of this district but now of Kimberley, B. C., are visiting at the home of Lars Hansen.

Mrs. S. Smith of Edmonton is visiting her sister Mrs. E. H. Arlt.

Mr. and Mrs. Ross of Vancouver are visiting in the Granum district.

Mr. and Mrs. Guy Clarke are visiting Ferdinand Dersch on the farm.

The Dersch Bros. received the sad news of the death of their sister Susan at Denough, Sask. Ed. Dersch and Vic, and their wives, and Pearl, went to Denough by car to be present at the funeral.

The infant son of Claude, of Mr. and Mrs. Gordon Gray, died July the 25th. Interment took place in the Granum cemetery.

## Canada Occupies Foremost Place In Seed Improvement And In Handling Registered Seed

Canada produced a considerably larger quantity of seed for the principal farm plants in 1925 than in any previous year, according to a report just issued by Mr. Peter Stewart, secretary of the Canadian Seed Growers' Association. It grew 40,000 bushels more registered seed than last year than in 1924, eight thousand bushels more of seed barley and seven thousand bushels more of registered seed clover seed. Increased production and ready sales of such seed, according to Mr. Stewart, indicates a growing appreciation of its qualities by farmers in Canada and in other countries.

A great deal of attention is given in this country to the provision of good seed for the farmer. Plant breeding is carried on by experts at agricultural colleges and experimental stations maintained by the Dominion and Provincial Governments. It is practiced by a number of individual growers who according to Mr. L. H. Newman, the Dominion cerealist, have contributed very materially to the improvement of the varieties of cereals and other farm plants commonly grown in Canada. The object of the plant breeding operations is to evolve varieties of grains, vegetables and fruits that are suitable for production under particular conditions of climate and soil, and that will measure up to certain standards of quality and quantity of yield. For the purpose of breeding of various strains of wheat has been prosecuted for a number of years at Dominion experimental farms to furnish varieties that will stand a certain degree of frost and survive a certain period of drought, that will produce a large yield of grain of good milling and baking quality. As everyone in Canada knows this cross-breeding of wheat has resulted of great value to the farmers and the country at large. Allied with the experts who evolve new varieties of plants are growers who multiply the seed of these varieties and supply it to the farmers. Many of these men whose business is to furnish good seed for the farmers are enrolled in the Canadian Seed Growers' Association, and its kindred organizations established in a number of the provinces. These men do work of great importance to agriculture in the Dominion.

Mr. L. H. Newman, the Dominion cerealist, has said that "among the matters of the world, Canada occupies a foremost place in regard to its organization both for systematic seed improvement and for the handling of high-class seed in commercial quantities under efficient control." There are indications that this is true in regard to wheat, originally evolved in Canada, the hard wheat and the soft wheat. Last year, a large shipment of Canadian registered seed wheat was shipped to Argentina to be planted by farmers there. Last year, too, the secretary of the Canadian Seed Growers' Association says, practically all of the supply of wheat for the Canadian registered alfalfa seed was bought up by farmers of the middle-west section of the United States. It is a considerable problem over the price of home-grown alfalfa seed plus a customs duty of four cents a pound.—The Mail and Empire.

### Dairy Industry Expanding In Few Years Manitoba Has Built Up Wonderful Business

Manitoba's dairy industry continues to expand. Starting with almost nothing 30 years ago, the provincial dairy production of 1925 reached nearly \$11,000,000. The province won 41 per cent of butter for the year 1925 and 34 per cent of the total dairy prizes. The first export of butter was made in 1915 with 25 carloads. Last year it was 215 exported to Eastern Canada and the British Isles.

#### Planting

A seed company received from some fifteen applications for free samples of their pea seeds, and when the interested enquirer arrived the manager decided it was time he did something. "Dear Sir, I am sending you the seeds as requested, but I am not doing with so much? Are you planting your whole suburb with peas?" A few days later he received a reply.

"No," it ran, "I am not planting them at all. My wife uses them for soup."

#### Bright Outlook

Husbands can't understand why wife ever complains about not getting what she has coming home in the evening to look forward to.

W. N. U. 1926

### Immigration To Canada

Good Percentage of Settlers Coming From Britain and United States. A sharp increase in immigration to Canada in April, 1926, over April, 1925, is shown in an official statement recently issued by the Canadian Government department of immigration and colonization. The total immigration for April amounted to 17,955 compared with 10,847 for April a year ago. In April, 1926, immigration amounted to 7,587; immigration from the United States, 2,007, and from other countries, 5,588.

Of the total immigration in April, 13,525 belonged to the farming class, 760 were laborers, and 1,415 female domestic servants. A total of 6,319 Canadians were recorded as returning from the United States in April after having visited that country with the intention of remaining there permanently and who now declare their intention of permanently residing in Canada.

### Alberta's Striking Growth

Sunshine Province Shows Remarkable Progress In Last Twenty Years. Alberta's progress during the period of twenty years is a striking evidence of the growth of the west, and especially of the Sunshine Province, as follows: agricultural production from \$20,000,000 to \$254,000,000. Wheat production from 3 millions to 103 million bushels. Area of all crops from 3,100,000 acres to 12,200,000 acres. Dairy products from 1,400,000 to 12,200,000. Coal production from 921,000 tons to 5,800,000. Manufactures from nearly \$2,000,000 to \$24,257,500. A 1,600 mile railway has increased to 4,800 and population from 200,000 to 640,000.

### More Money In Butter

Cream Yields a Little But Butter is Better. Recently Mrs. Alice Butler, of Rose Lake, Man., received the returns from four gallons of fresh cream she had previously shipped to a local creaming company. The cheque was for \$2.52. For an experiment, immediately on receipt of the cheque she made sixteen pounds of butter with four gallons of cream. She sold the butter at 40c a pound, or a total of \$6.40. She made, thus \$3.88 more with the same amount of cream.

The economic value of anhydrite has never been thoroughly established, but a growing use in agriculture may provide an outlet that ultimately may reach very considerable proportions. At the present time cargoes are being shipped from Walton, Nova Scotia, to Norfolk, Virginia, where it is used with success as a dressing for the soil.

Ground gypsum and anhydrite are considered very beneficial on heavy soils and on crops of a leguminous character. It acts indirectly as a fertilizer by reacting with the silicates of potash, thus liberating them as a plant food. It has also been used to great advantage, according to Mr. J. P. Messervy, deputy inspector of mines for Nova Scotia, around stables or manure piles where it acts as a disinfectant and also retains the ammonia, the greater part of which is otherwise lost from the manure.

The Nova Scotia experiment of mines draws attention to this interesting material in its last report, when it says:

"As a fertilizer it may be applied to the soil in drills or in hills, or sowed broadcast in quantities from 200 to 500 pounds to the acre. It has an affinity for water and draws moisture from the atmosphere, and keeps it in the soil where the roots of the small plants have a constant supply. The use of gypsum in the soil may, during a drought, draw enough moisture from the atmosphere to save a crop."

Dr. Dawson, in his supplement to Acadia Geology, in speaking of anhydrite says that "for land it may be regarded as more valuable than any of the various varieties (i.e., gypsum), as yielding water which amounts to about 20 per cent of the weight of the material."

"As a fertilizer it may be applied to the soil in drills or in hills, or sowed broadcast in quantities from 200 to 500 pounds to the acre. It has an affinity for water and draws moisture from the atmosphere, and keeps it in the soil where the roots of the small plants have a constant supply. The use of gypsum in the soil may, during a drought, draw enough moisture from the atmosphere to save a crop."

Industries representing more than 50 per cent of the gypsum producers of the United States recently adopted by unanimous resolution urging the United States bureau of mines to undertake work on the utilization of this material in the last report, when it says:

"As a fertilizer it may be applied to the soil in drills or in hills, or sowed broadcast in quantities from 200 to 500 pounds to the acre. It has an affinity for water and draws moisture from the atmosphere, and keeps it in the soil where the roots of the small plants have a constant supply. The use of gypsum in the soil may, during a drought, draw enough moisture from the atmosphere to save a crop."

Scientist Study Poultry Problems. Twenty-five years ago it was beneath the dignity of scientists to work with poultry. Today they are working on diseases, nutrition, genetics, etc., and many world famous scientists and investigators will be at Ottawa, July 25, to August 4, 1927, attending the World's Poultry Congress.

### Cultivation Of Corn

Cultivation Should Begin As Soon As The Corn Is Planted

Last year in Southern Saskatchewan approximately seventy thousand acres of corn were grown, states W. H. Gibson, superintendent of the Indian Head experimental farm, in a circular just issued, and corn is rapidly developing into one of the most important foreign crops. Corn is also recommended as a valuable summerfallow substitute, and when compared with other crops Indian Head in this respect corn had a higher yield the succeeding year than any other crop.

Corn used as a summerfallow substitute usually sown with a corn planter in check rows to assist in the cultivating of it, but where one has no planter very good success may be had by sowing with the ordinary grain drill. Cultivation should begin as soon as the corn is planted and continued until it is about six inches high. Harrow every week over this period and millions of small weeds will be destroyed and little if any damage done to the corn. Take care not to run too high for harrowing, a cultivator must be used, either the regular corn cultivator or the small garden one will do if the area is small. Take care not to run the implement too deep and the corn roots are shallow and may be injured.

Cultivation should be continued until the corn sheds the ground weed, which will be from it from three to three and a half feet high. Corn planted in check rows controls weeds, reduces the cost of growing grain crops, and provides abundance of feed for livestock production.

### Safeguarding The Forests

Smoking In National Forests of Montana Strictly Forbidden. All smoking has been forbidden in the "Kootenai" national forest, Montana, as a safeguard against forest fires which recently have been increasing.

If this regulation appears drastic it might be well to remember that the service has been continuing for years to educate us not to be careless with fire in the woods, and apparently we have as yet not learned this first lesson in woodcraft—Buffsalo Courier and Express.

Weekend is so drab that beam 2,000 years old are still strong.

## New Vessel Is Chartered By Government For Annual Patrol Of Arctic Archipelago

### Canada's Wheat Production

Will Reach Billion Bushels Annually Within Ten Years Is Prediction

For ten years Canadian wheat crops have averaged two bushels an acre more than those of the United States, says a bulletin issued by the International Institute of Agriculture. The Dominion's world record of production has averaged 15.5 bushels per acre since 1920, while that of the United States has been 13.3.

The five-year average for the other principal wheat growing countries is: Argentina, 12.3 bushels, British India, 11.5, Australia, 11.7.

The bulletin predicts that within 10 years, with the settlement of the Dominion's vast western agricultural lands, Canada's wheat production will reach a billion bushels annually.

### New Paving Material

Experiments Now Being Made With Chips and Sawdust

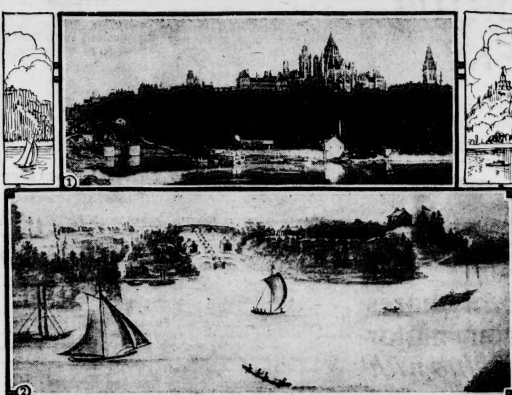

Sawdust and wood chips are among the paving materials with which experiments are being made, says "Science Sitings." The wood is first soaked in water and then submitted to pressure, and tests already made are said to have given a floor suitable for medium traffic from a mix of nine parts of sawdust to one of Portland cement. In German experiments, great adhesiveness for cement concrete is reported to be following giving the wood or sawdust a preliminary washing with curd soap and water, and then with a thin solution of silicate of soda.

Johnnie, when asked by his people to define "defect," said: "A defect is what you've got when you haven't as much as if you had just nothing."

"Have you wondered about your husband's past?"

"Dear me, no! I have all I can do taking care of his present and worrying about his future."

## Choice of Dominion Capital To Be Celebrated

1. Entrance to Rideau Canal, as it looked 100 years ago, as depicted from painting by Clegg of scene of opening of Canal, 1836.

In the late summer of 1832, Lieutenant-Colonel John By, of the Royal Engineers, selected the spot where the Rideau Canal should enter the Ottawa River, and in so doing settled the site that afterwards became the capital of the Dominion of Canada. The centenary of this event is being marked this coming August, by a celebration which is expected to be of national importance. The Dominion Government has already intimated its intention, not only of taking part, but of signalling the occasion by extension of its works for the beautification of the capital. The celebration itself will include historical pageantry and will draw from the western plains a spectacular "Stampede" as illustrative of one of the important phases of the development of that broad section of the Dominion.

In making his journey up the Ottawa River, Colonel By was not planning for the capital of a Dominion, but striving to strengthen the defenses of one of the outposts of the British empire. "During the war of 1812-15," says Lieutenant P. Hill, in a brief history of the builder as an engineer of high rank,

the construction of the Rideau Canal, which was a much more difficult task than the defence of the western part of the province. This was owing to the difficulty of the route, both east and west, from Montreal to Kingston, because of the rapids on the St. Lawrence River. They were also faced with the danger of a U. S. army blockading the river by seizing some of the islands near Kingston. The cost of transport from Montreal to Kingston was also excessive, being fifty-four shillings per cent.

This was the problem which Col. By came out to Canada to solve. He had spent nine years in this country after 1802, when he had been entrusted with the construction of the Martello Tower at Kingston, and he had also supervised the construction of the Cedars Canal near Montreal. The task of building the canal to connect the St. Lawrence and the Ottawa Rivers, 128 miles in length, through uncharted territory, was gigantic at that stage of the development of the country, and the builder as an engineer of high rank,

The coming of railways has superseded it and rendered it practically useless as a carrier of traffic, but it rendered valuable service in earlier days for the settlement of the province of Ontario, both east and west.

Three years after Bytown became Ottawa, it was chosen as the capital of the old province of Canada.

The centenary celebration this summer will last two weeks from August 16 to 28. The first week—August 16 to 21—will be devoted particularly to the centenary programme, which will include a historical pageant illustrating outstanding periods and events in the history of the capital. During the second week, August 22 to 28, the Dominion Government will give a daily programme; while arrangements are also being made for holding the British International Flower Boat races for two days of that week. Plans are not fully completed for the celebration, but among other proposals under consideration is the erection of a monument to Colonel By. The Dominion Government is also preparing plans for the extension of the Rideau Canal to such as alter the feature of the city.

### Saskatchewan Dairy Industry

Eleven New Creamery Plants Have Been Established This Year

Establishment of 11 new creamery plants in Saskatchewan to date this year in addition to improvements of old creameries is a record not equaled since the dairy industry started in the province. New manufacturing plants have been opened at Regina, Moose Jaw, Swift Current, Melville, Young, Parkdale, Spent and Kelvington.

P. E. Reed, dairy commissioner for Saskatchewan, stated that there was room for debate as to whether such a high figure in the number of creamery manufacturing plants was altogether justified by the present volume of production, but if production was estimated sufficiently to take care of the added overhead the industry as a whole would be benefited.

John Bull and France. Not only is it unfair that a heavy subsidy in relief of the French taxpayer should continue to be paid by the British taxpayer in the form of interest on the French debt; it is also most unreasonable that at a time when France makes such a large claim on our financial consideration, she should have increased against British goods a tariff which is such an exceptionally high—London Chronicle.

After marriage some women are as cruel as about their looks as men are about their actions.

Don't envy your neighbor's luck; envy his pluck, if any thing.

There will be horse races, baseball games, football game, hot dogs, Indian blankets, free hams and bacon, etc. Big dance and carnival in the open air skating rink. Friday and Saturday evenings. A Victor orthophonic photograph will be given as a grand prize. See posters for full particulars of the carnival and sports day.

## Here and There

S. Janowski and B. Stanhauser, the former Polish immigration delegate and the latter a delegate from the Polish Minister of Agriculture, are in Canada for a six-week study of farming conditions in western sections of the Dominion. They also look into the distribution of work among the Polish colonies in Canada.

Four fishermen from the United States went fishing on the Cains River, New Brunswick, for 13 days recently, and caught 340 fish. State Senator Bradford, of Indiana, caught a 45-inch salmon weighing 27 pounds. Others in the party were: Fred N. Peet, Dr. E. R. Zimmerman and D. H. Paxton. Only barbed hooks were used so that no fish were either killed or injured.

The second largest outdoor swimming pool in Canada has been opened at Lake Louise on the Terrace between the dining room of the Chateau and the Lake. The pool is 100 feet long and 40 feet wide. It is surrounded by tall concrete columns between the dining room and the lake. The pool is 100 feet long and 40 feet wide. It is surrounded by tall concrete columns between the dining room and the lake. The pool is 100 feet long and 40 feet wide. It is surrounded by tall concrete columns between the dining room and the lake.

Approximately 120,000 live fish, fresh from American hatcheries, passed through Dominion Express Yards, Windsor Station, Montreal, recently, on their way to Beauchaine, Quebec. They will be used to stock private lakes in northern Quebec owned by wealthy citizens of the U.S.A., who prefer the virgin hills and forests of Canada to the densely populated summer resorts of their own country.

Norman E. Wilkinson, London, England, inventor of camouflage paintings which was used extensively during the late war, arrived in Canada on the Canadian Pacific liner "Montclair" with his wife recently, for a tour of the Dominion. Sir Clifford Sifton, prominent Torontonian, and Sir Stephen Preston, M.L.E., famous mineral geologist, also arrived on the same vessel.

Col. C. H. Dyer, C.B. C.I.E., D.S.O., chairman of the Air Survey Company of London, England, interviewed Premier Mackenzie King and the prime ministers of the various provinces with regard to finding out the prospects of surveying practically the whole of the Dominion by air. He also wishes to know about the possibility of combined federal and provincial action for these surveys.

On his return from a recent tour of inspection of the Canadian Western Lines, Great Hall, Vice-President of the Canadian Pacific Railway, stated that exports to the Orient in the form of grain, flour, dressed meat and motor cars were steadily increasing in volume and that trade with Australia had been considerably stimulated by the trade arrangements with that Dominion. Mr. Hall added that conditions were good in the West. The mining industry in British Columbia showed up well, while lumber shipments were heavier than last year.

All roads led to Windsor Station, Montreal, for three days prior to the opening of the tenth annual international Kiwanis convention, which opened on June 6. Not only was the C.P.R. station the gateway through which an army of Kiwanians passed into Montreal, but every one of the delegates, their wives and friends, about 7,000 in all, converged there as the station had been constituted registration headquarters of the convention. A force of 38 steam-gaugers was specially engaged to handle the rush.

## Four Square Gospel

Sunday, August 1st.  
10:30 a.m. Worship.  
12:15 p.m. Sunday school and Bible class.  
7:30 p.m. Evangelistic service.  
Wednesday, August 4. Young people's meeting 8 p.m.  
Friday, Aug. 6. Prayer meeting 8 p.m.  
Jesus, Christ is still the Great "I Am," able to meet your need, whether for soul or body. If you have a need let us point you to the Lamb of God who can make you whole, for His love includes even you. For God so loved mankind that He gave His only Son that you might have eternal life.  
Services conducted by Rev. Atkinson and wife.  
You are welcome.

## Forestation on the Prairies

### Blade and Fruit Trees to Stretch From Winnipeg to Calgary

The belief so generally prevalent a few years ago that Canada's great prairie remains were not adapted to the growth of timber, plants that the state remain indefinitely unoccupied by trees, is rapidly being exploded through the energetic work carried out under the forestry farm system which in 1901, says the Toronto Globe, since that date \$7,500,000 trees have been distributed to farms in the three provinces, and inspectors now about to commence their summer tour of the prairies will report the fall on inspections made on 11,000 farms. The success that has so far attended these forestation efforts gives reasonable assurance that the results achieved during the past year will more than justify the expectations of those having the work in charge.

Nothing could be more desirable than to add to the solid productivity of the farms of the great west the attractive wood for a few acres of bush wood land. Apart from the substantial advantages which they possess as a protection to the crops from certain blights and the weather, the fact that they attain the proportions everywhere promised would give a distinct and valuable home to the stock of that vast country. Nothing makes the farms in Ontario and the prairie provinces so attractive and cultivated land, and with the trees so confidently expected to be in place in clothing the country with trees in the prairie provinces, the appearance possessed in such full measure by the agricultural stretches of this country.

But it is not only to the cultivation of patches of woodland, intended to give color to the far prairie vistas and relieve their monotony, that the people of the west are directing their attention. They are seriously engaged in planting and rearing trees for the farmer of the prairie is resolved upon possessing an orchard and producing his own apples. And he is achieving the success his labor and determination deserve. It will be some years, possibly, before he can discover the variety best adapted to the soil and climate, but he has not lost sight in his endeavor and he has his trials.

The work well under way to both directions, the prairie country from Winnipeg to Calgary, a stretch of 400 miles, should assume in no long time a new beauty and attractiveness.

### Nature's Balancing Act

#### Seventy-Ton Stone Can Be Rocked By Pressure of Air

There is a strange story connected with the Logan or Looking Rock near Lead, Eng. England. This stone, which weighs over seventy tons, was so severely pulled by Nature that, although the pressure of a hand could rock it, it appeared beyond the power of anything short of an explosion to dislodge it.

However, about a century ago a naval officer in command of a revenue cutter thinking that coast was annoyed to find that anything was beyond the powers of British men-of-war. One night he climbed to the Logan Rock with a dozen men, who set the stone rocking to such an extent that it tipped off its base into a narrow chasm below.

This act raised local anger to such an extent that the admiralty commanded the officers to show further evidence of his resources and power by putting the rock back again. By the aid of thirteen captans and chain cables, this task was actually accomplished.

### Measuring Hat Heat

#### French Scientists Prove That Panama Is Coldest Headgear

During a heat wave in Paris recently a group of scientists held an investigation to find out how hot hats were. The experiments were made at a temperature of 97 degrees Fahrenheit. The sporting cap was found to be hottest of all, with a heat between 11 and 55.5 degrees. The derby was next at 92 degrees. Felt hats showed only 58 degrees and the stiff straw 73 degrees. The Panama was over all with only 77 degrees—20 degrees cooler under the hat than outside—New York World.

### Recorded

Harry—How long have you been married?

Harold—Let's see. I bought this suit in an wearing four years ago.

"Aren't you nearly ready, dear?" I wish you wouldn't keep asking that question, Clarence. I've been telling you for the last hour that I'm ready in a minute."

M. S. L. 1856

## Cultivation Of A Delicious Food-Fruit

### A Very Few People Know How Bananas Are Grown

Many fine fruits really are to be found in the production and distribution of the banana. Probably very few of the millions who enjoy this delicious food-fruit realize the wide range of human endeavor and the variety of activities involved in its cultivation. It is in its long but rapid journey from the tropical plantation to the consumer's table.

The banana plant, or tree, as it is commonly known, is a rapidly growing herbaceous perennial which contains the aggregate about 85 per cent of water. The root trunk or main stem of the plant is under ground and is a thick, fleshy rootstock, known as a rhizome, on which large buds, or eyes, develop, somewhat as on the potato.

From the buds on this short, solid-bulb root, the leaves grow upward, the whole being tightly rolled and sharply pointed. Growth takes place rapidly, new leaves pushing up through the centre while the stalk increases in height until it is several yards above the ground. What seems to be the trunk of the tree is in reality only a series of overlapping leaf-sheaths. As the plant develops, the older leaf-sheaths are pushed outward by the young, growing leaves within, and a smooth, shiny, green, or light-brown, leaf-sheath, bright green or light-brown, grows upward, or rises almost vertically, giving a very striking, palm-like aspect to the plant. It grows to a height of 15 to 20 feet, attaining a breadth of two feet and even more. Their number varies from 15 to 20, according to the soil conditions and the vigor of the plant itself.

As the individual plant approaches maturity it produces a bunch of bananas. The stem which is to bear the fruit grows up from the rhizome, sheaths, until at the end of the ninth or tenth month after planting, the young banana, quite small and immature, is seen. As this flower-bud increases in size, it bends over and downward. The buds then drop off, discarding the young banana, quite small and immature, pointing outward; these turn upward as they become larger.

Each plant bears but a single bunch of bananas, which is made up of so-called hands (clusters), each containing from 10 to 20 individual bananas or fingers. The number of hands on a bunch ranges from six to ten, while the average weight of a nine-hand bunch is from 50 to 75 pounds.

The banana is always cut green, even when it is to be consumed locally in the tropics. If allowed to ripen on the plant, it entirely loses its delicious flavor and becomes luscious; also the skin bursts and insects attack the opening pulp.

### London Has Strange Court

#### Artique Dealers Settle Disputes Without Going to Law

One of the strangest tribunals in the country sits in London at regular intervals in the upper room of the corner of King Street and St. James' Street, which is in the centre of the art world of London.

It is the antique dealers' "High Court of Justice," to which any of the 50 members of the British Antique Dealers' Association has the right of appeal. Its judges, who sometimes number as many as twenty, include some of the world's greatest experts on precious stones, old china, tapestries, pictures and antique furniture.

Decisions, arising out of the sale of an antique of more than ordinary importance are often referred to the court for arbitration, and if they think of the judges have the right to call in independent experts from the art world. It is to protect the interests of antique dealers and safeguard the honor of their industry that this tribunal has been established.

Private collectors who buy their antiques and curios through a member of the British Antique Dealers' Association have the same right of appeal to this moral tribunal as dealers. The controversy may be over a chair, an old vase or a fine tapestry. The article in dispute is sent to the "court," where it remains perhaps for days while the judges make up their minds about its antique genuineness or rightful value.

First Actress (cuttingly): I wonder does it shall have any looks, too, when I reach your age?

Second Actress (equally cuttingly): Well, dear, perhaps you may. You need know any look. Let's hope so, anyway.

Mary had a little lamb,

And sheeep turned into mist.

And the mistion into stars.

## The Battle Of Jutland

### Plenty of Room For Controversy Over the Outcome

The status of the Jutland controversy on the tenth anniversary of the battle indicates that it will never be settled to the satisfaction of all the contending parties. The mere passage of time cannot eliminate the numerous "ifs," "buts" and "howevers." All that time can do is soften the heat of the argument and remove the present-day contestants from the field.

Those who contend that England won a complete victory are answered by the fact that the German fleet was not entirely put out of business. That the German fleet was taught a lesson that prevented it from being a decisive factor in the war constituted, after a moral conquest only. The Germans were badly battered; if the British had followed their advantage, an overwhelming victory might have been achieved. But this again is a hypothetical decision.

Supposing that the positions of Beatty and Jellicoe had been reversed. It is interesting mainly because it involves an evaluation of personal characters. Jellicoe, as subordinate, might well have pursued his course with success equal to Beatty's. Beatty in Jellicoe's position, might have dodged the admiralty's order not to risk the destruction of the grand fleet and in addition carries with it a great many other benefits.

Farming is a basic industry designed to meet the fundamental needs of the race, and involves a partnership with the Creator of all things.

### An Emergency Raft

#### Clever Invention of English Vicer Serves As Lifesaver

A ship's cabin door, which can instantly be converted in case of emergency into a lifesaving raft, has been invented by the Rev. Arthur Grimth, vicar of Brantingham-on-Kelk, near Hull.

The door is freed from its hinges by a slight twist of a lever, resembling that of the emergency door of a cinema. It is given to the "Workers' Standard," established by the government.

Teacher—Willie, did your father write this essay?

No, mamam. He started it, but mother had to do it all over again.

The man who does his best seldom has to look for a job.

## Rural Citizenship

### Ontario Minister Says Farmer Should View His Calling With Pride

Rev. H. W. Armstrong, an Ontario minister, the Kingston British Whig observes, has been doing splendid service through a series of studies on "Rural Citizenship" and demonstrates that the farmer should view his calling with pride, confidence and contentment. And to give the countryman new basis for his contentment, he summarizes what farming really does.

Here are his findings: Farming is more free from slavery and monotony than the majority of occupations, because it affords a great variety of interests and is constantly calling for initiative and constructive thinking.

Farming affords as much leisure for cultural pursuits as the majority of occupations, because there are seasons which afford a relaxation from rush and fatigue, and because the nature of the work gives to the farmer an independence which enables him to have almost complete control over his own habits.

Farming, although fatiguing to the muscles, is healthful and invigorating, because of the fresh air, pure food and variations which the occupation affords.

Farming brings a return that is about equal to that of skilled labor, and in addition carries with it a great many other benefits.

Farming is a basic industry designed to meet the fundamental needs of the race, and involves a partnership with the Creator of all things.

### The Instinct Of Fear

#### Affects Every Person But Some Can Conceal Evidence Of It

Fear is instinctive in man because he is mortal. From death the life in us shrinks, and from injury the flesh of our backs tucks. Yet a man will risk life and incur wounds, and the most fearless man is the one who does it with the best grace, with the least outward evidence of that reluctance that is instinctive. He is afraid but courageous to the last degree. He would rather die than win. He would rather be killed than be seen to shrink. All men are capable of fear, but some subjugate it as few others can.—Toronto Star.

## Strange Happenings In London's Old Bailey

### Warder Tells of Mysterious Incident In Historic Prison

Visitors to the famous Old Bailey of London often ask the officials if the ghosts of executed criminals haunt the Central Criminal Court.

The Old Bailey, with its grim history, seems just the place where eerie sounds and sights would be encountered.

Strange things have happened in the Old Bailey and in Newgate, on which the present palace of justice stands. One of the wildest mysteries of that Old Bailey of the past was a midnight "call" to an empty cell. It came from the "death cell," where convicted murderers were confined. There was a button in the cell which was connected to an electric bell in the chief warder's room. One night the "death cell" bell gave three sharp rings.

The warder, knowing that the cell was empty, took no notice. An hour later the bell sounded again. He left his bed, dressed hurriedly, and made his way to the cell. Everything was in order. The cell was just as he had seen it earlier in the night. The warder returned to his room and went to bed.

At large o'clock the "death cell" bell sounded again, but this time the warder refused to obey the summons. When daylight came he carried out a prolonged search, but was unable to find any clue to the mystery, though he discovered, on turning up the prison records, that the "call" came on the anniversary of a murderer's death.

### The Instinct Of Fear

## Egg Grading And Its Results

### Profit to the Farmer Through System Of Standardization

Hon. Hugh Guthrie recently sponsored a motion in parliament to amend Canada's grading law for the purpose of removing "graveyard" eggs from the market. Mr. Guthrie's constituency, showed that during a five weeks' period in March and April there were 100,000 eggs in the required classification, received on an average three cents per dozen more for eggs than did those at Waterloo, where 58 per cent of the eggs are graded.

It looks as if someone had been "robbing" the farmer. Mr. Guthrie. Beyond all question the egg grading law makes more work for the farmer and his wife. Also it brings more profit to the farmer and his wife, but it also makes the market for their products more competitive and wider markets are being opened up. The farmer who expects to get them without any increase of effort on his part is not fooling himself. People who want more profit and who expect to get it by going after them, and in the egg business it has been proved that probably the best way to get more is to follow, closely, the regulations of the egg grading law.

This is an age of standardized products and services. Consumers are being educated more and more to buy only standard goods. Producers are finding that it is no longer a disadvantage to produce a standardized article. In the egg business the effect of the grading law is being felt in a most apparent way. Without any grading regulations many people would not take chances on eggs in their meals. It was not that they didn't like eggs, but they were afraid to eat them. Now they are going to get what they paid for. With the grading regulations in force in the short period of three years the percentage of standard eggs in Canada has been increased from 23.16 down to 58.66 dozen per dozen.

It is to be hoped parliament will never take any backward step with, regarding the egg grading law, and regulation, as they do in other cases, and as they do in the case of food products and consumption both at home and abroad. Such regulations cannot be too rigid, nor enforced too strictly. Upon their enforcement depends our success as producers in home and foreign markets. It is to be hoped that the government will increase demand for the home product, while abroad they aid us to meet successfully the competition of standardized products of other countries, which we must do if we are to make any headway.—The Calgary Herald.

## Lowe Brothers HIGH STANDARD OUTSIDE PAINT

Lowe Brothers Liquid Paint costs approximately 1/2¢ per square foot. This is another way of saying that "job cost," which should always be the measure of your painting cost, "High Standard" is the most economical paint you can buy.

The reason is to be found in its exceptionally high quality, the fineness to which it is ground and the purity of materials used.

It gives a very high gloss. Wears evenly for years and comes ready for use in thirty handsome shades, and is very easy to apply. Try it when next you paint.

Price—1/2¢. Sq. Ft.

## Neptunite Varnish-Stain

Make scuffed or faded furniture like new with this splendid Varnish-Stain. It is exceptionally easy to apply and dries to a beautiful micro-like gloss that is free from stickiness. It retains its beauty for a surprisingly long time and does not fade. Splendid for floors, furniture and woodwork.

For graining beautiful effects, representative of the grain of handsome hardwoods can be obtained with Neptunite Graining Compound finished with Varnish-Stain. Comes in six attractive shades.

## Neptunite Varnish

Lowe Brothers Neptunite Varnishes are ideal for either Exterior or Interior use.

They have the distinction of being the only varnishes made that have successfully withstood the heat from a hot iron on their surface. They will not turn white, crack, under the hammer test, or show heel marks. Ice, snow or rain have no effect on them. They produce a remarkably beautiful finish; they wear longer and cost less than most good Varnishes.

## Porch Floor Paint

Is Specially made to withstand the extreme hard usage to which a verandah floor is subjected. The scraping of feet and verandah furniture will not affect this finish when properly applied. It will stand up under the rigours of the weather and preserve your verandah floor for years. Like all Lowe Brothers Products, Porch Floor Paint is very economical. It is easily applied and a pint of this paint will go almost as far as a quart of most any other so-called "cheap" exterior floor paint.

Porch Floor Paint is made in a splendid range of colors, one of which is sure to please

## Mellotone Wall Paint

Walls that are finished with Mellotone need never be marred with finger prints or dust spots. Mellotone is washable; it may be washed with soap and water just as often as necessary without injury to its delicately beautiful finish. Mellotone combines all the durable qualities of an outside paint with the soft, attractive rest tones that are so much desired by particular people. Mellotone is so easy to apply, it lasts so long that its first coat is practically permanent. Come in 16 beautiful shades.

## Hard Drying Floor Paint

This is the floor paint that does away with the back breaking drudgery of scrubbing. Simply mop this high gloss finish and you have a floor to be proud of.

Hard Drying Floor Paint is a floor enamel of exceptional toughness. It dries over night with a glossy and elastic surface that will stand a very amount of wear and will not chip off or peel. Made in a variety of popular colors, ready for use.

## Bear Hunting In Rockies Best In Spring

In the Big Bend district of the Upper Columbia River in British Columbia lies the largest tract of grizzly bear hunting territory in the Dominion. On the two hundred mile stretch between Beaver, mouth, and Revelstoke, both on the main line of the Canadian Pacific Railway, there are approximately thirty creeks, some large enough to be classed as rivers. Of these about twelve are known to be the habitat of the grizzly while many of them have not heard the sound of a rifle in years.

This spring a systematic effort was made to place the hunting possibilities of this great district within the reach of prospective visitors. Search of the trail which only grow quarters with Ureca Horribilis can produce. Through the co-operation of all the best known Rivermen on the Upper Columbia, trips can be made in comfort. Game and fish are plentiful and the scenery is sufficient to satisfy the desire of the most exacting mountaineer. At low water such as exists up to about the end of May it is possible to gain in safety such well known waters as Harpiss, Kimberley, Gordon, Priest and Death Rapids, as well as the far-famed Canyon of the Columbia itself. This is a season when many as fully as the actual hunting.

Upper—A couple of hunters with some of their game. Lower left—On the war path. Lower right—Beaver Canyon, near Beavermouth, B. C.

As far as is known, no party of non-residents has ever made such a trip. The last pair of local hunters, who spent twenty-one days in route, brought in a bag of over fifteen bears, including several very large grizzlies and three live grizzly cubs. One of the best known Banff guides, when the present bear hunt is in full swing, also advises that April and May are the best months for hunters seeking grizzlies as trophies.
